## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. The following is an examiner's statement of reasons for allowance:

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Claims 1-16 are allowable over prior art of record.

Independent claims 1 and 8 are allowable since the claims recite a cross-talk removal apparatus that separates the cross-talk from the reproduction signal of the main track, increases the cross-talk by applying a disturbance to the control signal, then applies an optimum delay. The closest prior art by Ishibashi et al. (US Pat. No. 6,442,144 B2) discloses an apparatus for cross-talk removal that employs jitter detecting means and a series of adjustable delays to remove cross-talk from an optical data signal (see abstract). Ishibashi does not disclose that a disturbance is applied to the control signal.

Claims 2-7 and 9-16 are allowed as being dependent upon the aforementioned independent claims.

### ***Conclusion***

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Art Unit: 2651

- a. Kim et al. (US Pat. No. 6,680,891 B2) discloses a method for canceling noise inherent in the signal of an optical data system.
- b. Miyanabe et al. (US Pat. No. 6,084,837) discloses a cross-talk reducing apparatus that reduces cross-talk in optical data signals through varying filters.
- c. Ishibashi et al. (US Pat. No. 6,738,326 B1) discloses an apparatus for reproducing data from optical data storage tracks that employ variable delays in order to filter out noise.
- d. Ishibashi et al. (US Pat. No. 6,330,213 B1) discloses an optical disk drive device with detectors for detecting signal error and noise.
